

## CASE STUDY 1

# OUR COMMITMENT

Here at Withers Group plc we are committed to finding solutions. Our Piling and Foundation Solution division is dedicated to this service. Having been involved in Piling and Underpinning for almost 30 years we pride ourselves on our first class reputation. Our reputation has been achieved through hard work in providing our clients with professional cost effective, soundly engineered solutions to a multitude of problems.

Although a substantial part of our business is insurance related we have found ourselves increasingly being involved in more new build projects. These range from small domestic extensions, to new build houses, blocks of flats to factory and supermarket extensions.

To enable a continued improved service to our clients we have added two new piling rigs to our fleet.

### **Techno Drill 610**

This provides us with a very powerful limited access rig capable of installing up to 450mm diameter piles to depths in excess of 20m.

### **Klemm 708**

This rig allows us to compete on the larger projects. Weighing in at approximately 7 tonnes with its 6m mast this rig is ideally suited to the more open sites.

We are pleased to say that you - our clients are looking to us to provide a more comprehensive service.

We are committed to satisfying your requirements.

You have a problem, we provide the Piling and foundation solutions.
