

CASE STUDY 8

HAS THE EARTH MOVED FOR YOU THIS SUMMER?

It's a fact that a very dry long hot summer will produce a large increase in subsidence related insurance claims in the months following. The South of England with its underlying clay subsoil often accounts for a vast majority of these claims.

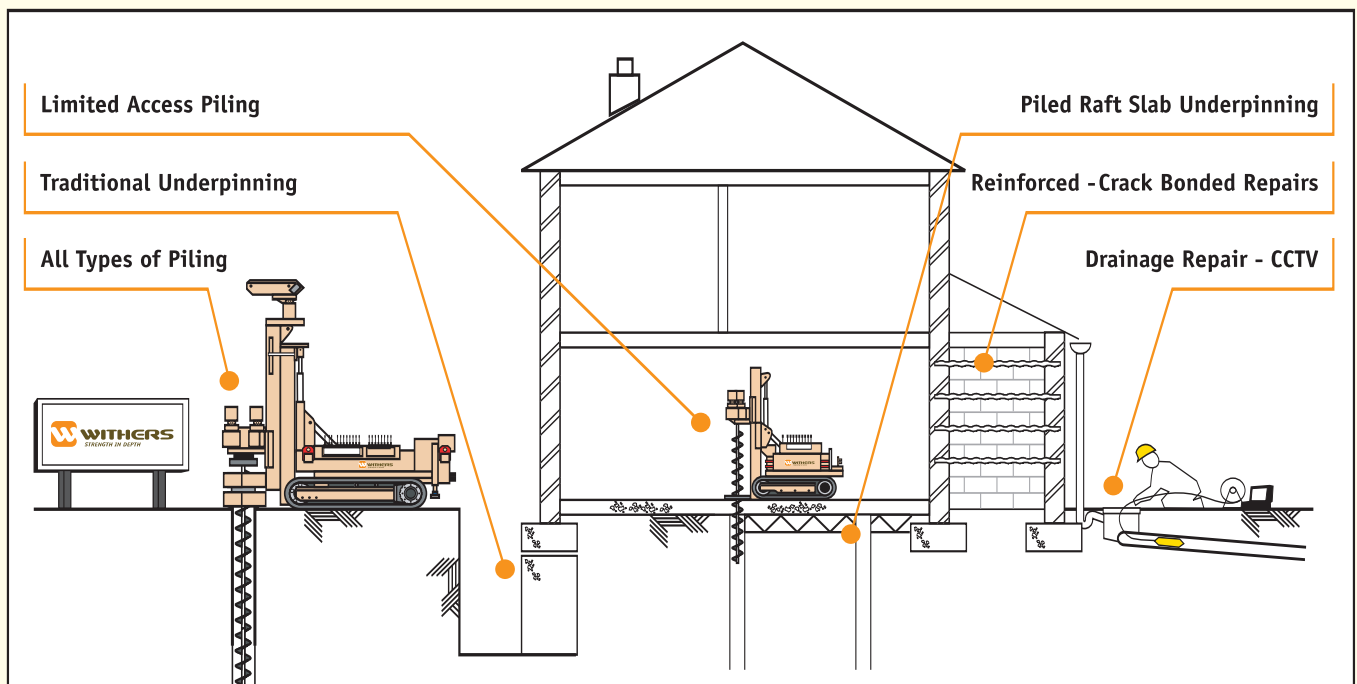

At Withers, we are ready, willing and very capable of meeting the demands of this increased workload.

With 30 years experience in underpinning we are geared to carry out the full range of subsidence repair techniques.

From Site investigation works, drainage, resin bonded reinforced crack repairs to traditional mass concrete underpinning and piled raft solutions Withers can provide the complete package. This package can range from full design to final reinstatement of the property under one umbrella.

As members of ASUC Plus we are able to offer a 12 Year Defects Insurance Guarantee for the vast majority of projects that we undertake.

Although the past few years have seen a dramatic downturn in subsidence related work, we have continued to invest in our staff, plant and equipment. This will enable us to provide you with a more efficient, cost-effective solution as and when the need arises.
